

THE AUTOPUBLISH BLUEPRINT

One Command. Every Platform. Zero Hands.

The exact workflow that writes the post, brands it, designs it, edits the video, voices it, and auto-publishes everywhere — run solo from a café in Bali.

MCP

The Pipeline — 6 Stages

Every stage runs inside **one Claude Code session**. No app switching, no copy-paste, no VA. Claude orchestrates the tools through MCP and the command line — you approve, it ships.

1

Generate the post from scratch

Claude writes hook, body, and CTA in your locked brand voice (contrarian hook → reframe → arrow lines → vulnerability beat → CTA + hashtags), picking the daily angle from a rotating hook-bank so you never repeat.

Claude Code · brand voice template

2

Brand + design the visual

Copy drops into a reusable HTML template (cream + emerald system). Claude renders a pixel-perfect PNG with a headless browser — no Canva, no designer.

HTML template · headless Chrome render

3

Edit the video — single pass

Raw screen-recording → polished promo in one ffmpeg pass: cut dead air, color grade, hook card, rotating top strap, picture-in-picture of the artifact, platform chip strip, benefit callout, outro CTA.

ffmpeg (NVENC) · one encode, not many

4

Generate the voiceover via API

Script → broadcast-quality narration through the ElevenLabs API (locked brand voice). Sidechain-ducked cinematic music under the VO, overlays Whisper-timed to the words.

ElevenLabs API · Whisper sync

5

Host the asset publicly

Final MP4/PNG pushed to a public asset repo so every platform pulls one canonical URL. Version-controlled, instant, free.

GitHub raw host

6

Auto-publish everywhere at once

One command fires the post to all connected accounts through GoHighLevel MCP — Instagram, Facebook, Pinterest, Google Business, LinkedIn, TikTok, YouTube — images AND video, in real time. Schedule or publish now.

GoHighLevel MCP · create-post → 13 accounts

The Same Engine, 6 Scenarios

One pipeline, swap the inputs. Each scenario reuses stages 1–6 — only the asset type and caption template change.

SCENARIO 01

Daily authority post

- ▶ Hook-bank picks today's angle.
- ▶ Single branded card render.
- ▶ Fires to all socials at 9pm Bali.
- ▶ Output: 1 post · ~4 min.

SCENARIO 02

Carousel teardown

- ▶ One idea → 8-slide narrative.
- ▶ Batch PNG render, consistent grid.
- ▶ IG / LI / Pinterest pin set.
- ▶ Output: 8 slides · ~7 min.

SCENARIO 03

Cinematic reel

- ▶ Raw clip → 9:16 vertical cut.
- ▶ Grade + beat-snapped title cards.
- ▶ VO + ducked BGM, single ffmpeg pass.
- ▶ Output: reel · ~10 min.

SCENARIO 04

Demo / product promo

- ▶ Screencast → branded landscape promo.
- ▶ Hook card, strap, PiP, CTA outro.
- ▶ This very PDF's source workflow.
- ▶ Output: 1:52 promo · ~15 min.

SCENARIO 05

60-day content engine

- ▶ One brief → 60 days cross-channel.
- ▶ Bulk render + GHL CSV schedule.
- ▶ Client ops: 8 hrs/wk → 30 min.
- ▶ Output: full calendar · ~1 hr.

SCENARIO 06

Client-branded white-label

- ▶ Swap palette + voice + handles.
- ▶ Same 6 stages, their brand.
- ▶ Their GHL, their socials, hands-free.
- ▶ Output: managed channel · retainer.

Pattern: the pipeline is fixed; only the **input** and **caption template** vary. That's why one operator runs what used to take a 10-person team.

The Stack

Layer	Tool	Job
Brain / Orchestrator	Claude Code (Opus)	Writes, decides, runs every tool
Design render	HTML + headless Chrome	Copy → branded PNG
Video	ffmpeg (single pass)	Cut, grade, overlays, captions
Voice	ElevenLabs API	Script → narration
Host	GitHub raw	One public URL per asset
Distribution	GoHighLevel + MCP	1 command → all socials

Why It Works

The mindset shift

- ▶ Most people use AI as a *tool* — ask, copy, paste.
- ▶ The leverage is making AI *operate the system* end-to-end.
- ▶ You move from typing tasks to approving outcomes.
- ▶ A few years ago this needed a whole team.

The rules that keep it real

- ▶ One canonical asset URL — every platform pulls the same file.
- ▶ One ffmpeg encode, not N — speed + quality.
- ▶ Locked brand voice — no generic AI tone.
- ▶ Verify the pixels, not the agent's word.

The 80/20: the whole edge is collapsing 6 disconnected jobs into 1 orchestrated session. The tools are commodities — the **orchestration** is the moat.
